CALCUTTA: BY ORDER OF THE TRUSTEES OF THE INDIAN MUSEUM. 1889.

PREFACE.

THIS catalogue, which comprises all the known moths of the Indian region, including Burma and Ceylon, aims at being a handbook of reference for Indian naturalists who interest themselves in the moths of the country.

No pains have been spared in its compilation, which has taken more than three years to accomplish, but the work has presented exceptional difficulties owing to the fact that no satisfactory classification was in existence. Old authors were content to describe all Indian moths under the generic mames of Sphinx, Bombyx, Phalæna, Noctua, &c., while mardly any two modern writers adopt one classification. The type specimens, from which the species were originally described, are mostly the property of museums and private individuals in Europe; working in India therefore, where it is impossible to examine these types, it has been necessary to adopt many species, which will probably prove. on further examination, to have been founded upon characters of too trifling a nature. It is hoped, however, that the cerrors and imperfections, which a work of this kind must nlecessarily contain, will not seriously detract from its usefulnicss.

The work is published by the Trustees of the Indian Museum, and the thanks of the compilers are also due to the following:—Mr. F. Moore, who has examined many types in the British Museum, determined specimens, and given his itavaluable help in the revision of the whole catalogue; Mons. Itagonot, who has taken much trouble in revising and classifying the Crambites; and Lord Walsingham, who has given assistance and advice with reference to the Tortrices.
